

Modo builds bank-grade payments stacks for enterprises. With one connection to Modo, you get all the benefits of a payments hub, gateway, and switch. Gain global access to the payment services and local payment methods you need to better serve your customers. By leaving the payments plumbing to the #paymentsgeeks, you won't have to worry about managing or maintaining your payments operations.

/Checkout

With Modo's /Checkout product, you are given the flexibility to connect to payment service providers and payment methods in the regions that are most relevant to your business. Integrating with new payment services can be done in the click of a button. You can simplify your payment operations with tools like a dashboard, payment service configurator, and hosted checkout.

Features

Assurance - Transaction routing for soft declines

Connect - Adding, configuring, and managing payment services

Insights - Dashboard, reporting, and notification engine

Manage - Centralized dispute, chargeback, and refund and configuration management console

Modal - A hosted checkout experience presented within the client user-interface

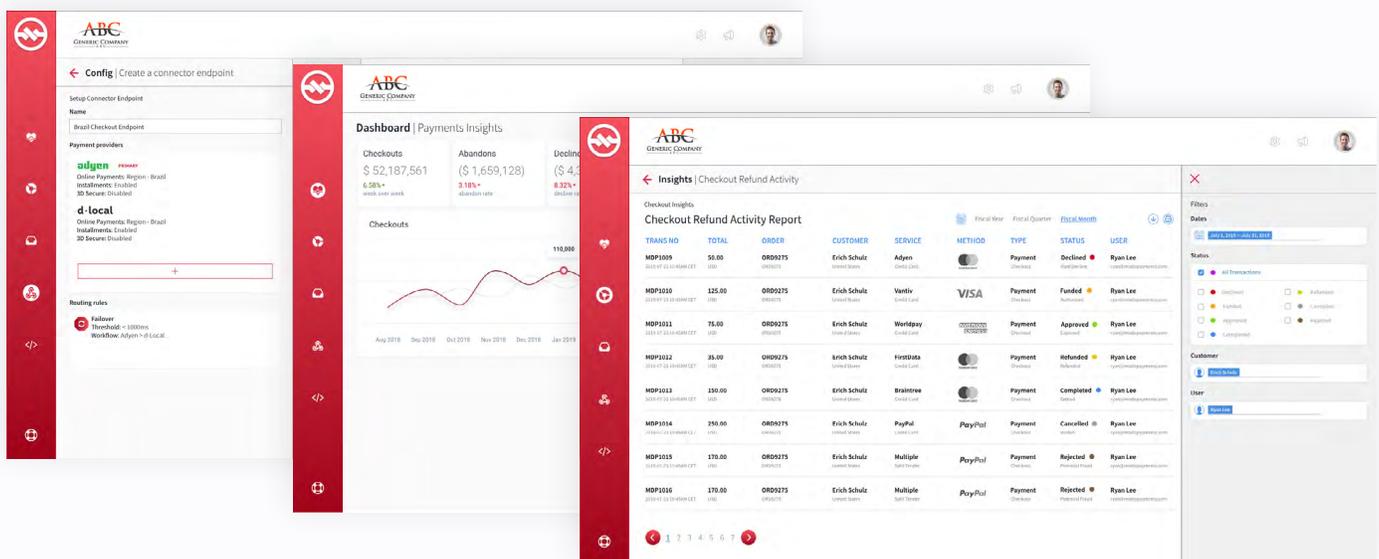

Secure - Hyper-compliant secure token vault

Settle - Consolidation of settlement reporting with near real-time visibility

Optimize - Business-rule driven custom routing by payment type, method, service, and availability

The screenshot displays three panels from the Modo client portal:

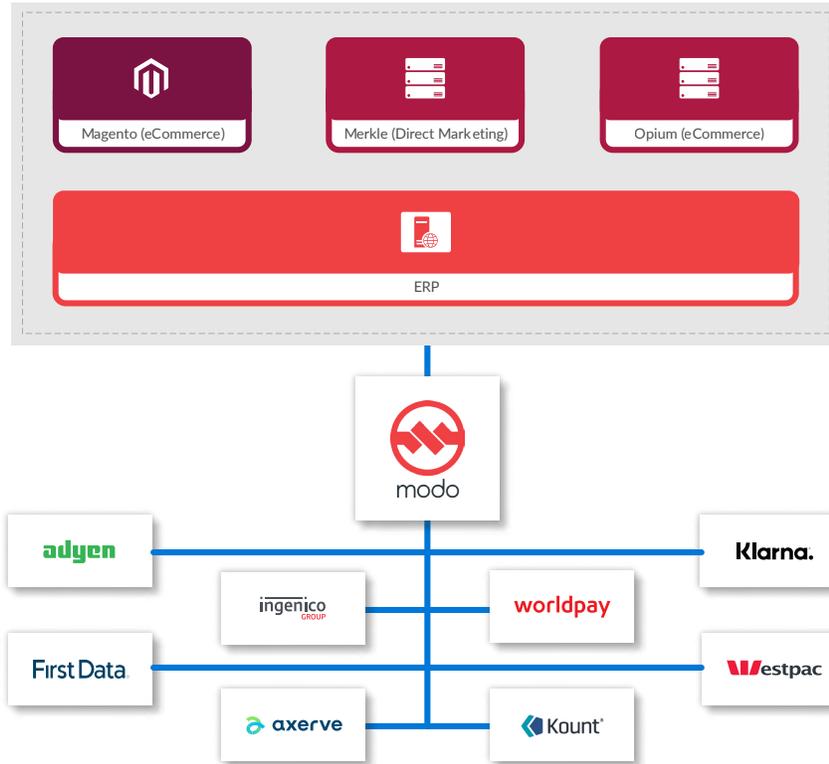

- Config Panel:** Shows options to 'Create a connector endpoint' and 'Setup Connector Endpoint'. It lists payment providers like 'adigen' and 'd-local' with their status (Enabled/Disabled) and security settings.
- Dashboard Panel:** Titled 'Payments Insights', it shows summary statistics for Checkouts (\$52,187,561), Abandons (\$1,659,128), and Declines (\$4,323,400). It includes a line graph for 'Checkouts' over time.
- Insights Panel:** Titled 'Checkout Refund Activity', it displays a table of transactions with columns for TRANS ID, TOTAL, ORDER, CUSTOMER, SERVICE, METHOD, TYPE, STATUS, and USER. The table lists various transactions with their respective statuses (e.g., Declined, Funded, Approved, Refunded, Completed, Cancelled, Rejected).

Modo's client portal allows you to manage and maintain your entire payments stack in one place. Toggle payment service providers on or off, set up routing rules, add new payment methods, and get insights into the health of your payments, all in a user-friendly dashboard. And since the payments fun doesn't end until settlement and reconciliation, neither does Modo. Get unified reporting of your settlement and reconciliation files for every transaction in every currency - even if they're processed differently.

In the current state of payments, every integration requires tight coupling with systems of record from financial management to enterprise resource planning, with the new connections taking nine months to a year to complete. Modos makes lengthy integrations a thing of the past with click-button integrations and streamlined payment operations.

Actual Customer Environment

WORLD WIDE OPERATIONS

This client needed eight different payment service providers to serve their global customer base.

FRAGMENTED PROCESSES

Treasury and finance had to do everything eight different ways.

UNIFIED OPERATIONS AND VISIBILITY

Modos created a unified approach and perspective of managing payment services.

“We have been very impressed with Modos’s capabilities and technology. Their product enables us to focus on the core values of 14 West – to innovate and perpetually improve the customer experience. Modos is thinking about how payments will be done 30 years from now – not how they have been done for the past 30 years.”

- Daryl Berver, COO for 14 West
